Before you present: checking a deck an AI tool wrote

For every deck: fill in the first line, then do not present until every item is ticked.

Goal · numbers of the slides where students answer

1. The four rules

- [ ] One idea per slide, with short text.
- [ ] A question for the whole class every three or four slides.
- [ ] A worked example before every practice.
- [ ] The explanation in the speaker notes, not on the screen.

2. Facts and level

- [ ] I solved every problem myself and checked every definition, date and number against the textbook or a reliable source.
- [ ] No slide needs something students have not learned yet.

3. Language

- [ ] The language is correct, and the terms match the students' textbook.

4. Images

- [ ] Every picture explains something, and any text inside it is correct and readable.
- [ ] I know where every picture I did not draw comes from, and I am allowed to use it.

5. Sources

- [ ] I opened every source the deck cites, and removed any I could not open.
